SUMMARY

Software engineer at Warren Investimentos. Started as an intern and moved to assistant and then junior developer in about a year. Builds features end to end, from proprietary APIs to advisor-facing tools, including a recent rebuild that took page load times from minutes to seconds. Writes clean, testable code and works closely with product and business teams.

Core stack: TypeScript · Next.js · React · NestJS · Node.js

EXPERIENCE

Warren Investimentos · Jul 2024 – Present

Junior Software Developer

Aug 2025 – Present

- Built a self-service rate-management screen for the advisors' CRM (Next.js + .NET) so partners can edit their clients' rates without contacting support. Fixed an N+1 by batching the per-client routes, which dropped requests per client from 4 to 1 (75% fewer), and added streaming-based loading. Load and search times went from minutes to seconds, plus column sorting the first version never had.
- Building Otto, an AI agent that reads invoices from the finance team's inbox and enters them straight into NetSuite, so no one has to key them in by hand.
- Rebuilt the proprietary in-app news system as a HubSpot-managed tool, so Marketing runs it directly. Deleting a news item no longer needs a database deploy, and bugs like news that wouldn't expire on schedule are fixed.
- Applied the same batching to a client list in the advisors' CRM, which cut its load time as well.
- Helped ship a meeting-logging tool, and have been migrating legacy flows to Next.js (currently the indicative-quote flow).
- Delivered ReportsJS + Vue.js reports for consolidation clients, set up the consolidation white-label software and infrastructure, and shipped smaller features and fixes on the investment platform in Vue.js.

Assistant

Feb 2025 – Aug 2025

- Built a proprietary WhatsApp API from scratch in NestJS, integrated with Meta's official API and HubSpot. Owned the full process, from buying and setting up the number to the integration itself, which gave the team a new channel beyond email.
- Built an investment-scenario simulator in Next.js using geometric Brownian motion (a stochastic process) to help generate leads.
- Worked part-time with the CRM team, mainly on campaign automations.

Technology Intern

Jul 2024 – Feb 2025

- Handled the Marketing team's tech needs: HubSpot integrations, landing pages, and campaign automations.
- Built fast landing pages in React, Next.js and TypeScript with SEO in mind, and wired up REST API and third-party integrations.

SKILLS

Languages & Frameworks: TypeScript, JavaScript (ES6+), Next.js, React, NestJS, Node.js, Vue.js

Tools & Practices: REST APIs, Git/GitHub, Jest, Storybook, Clean Code, integrations (HubSpot, Meta API, Gmail API), HTML, CSS

EDUCATION

Associate Degree (Technology), Systems Analysis and Development · Centro Universitário Facens ·

Mar 2023 – Jul 2025

CERTIFICATIONS

JavaScript ES6 Complete · CSS Grid Layout · English (Professional Working)
